WHO IT'S FOR

Businesses (large or small) with a software development focus that are experiencing or are expecting technical and capacity challenges with scaling their business.

ABOUT BUILD FOR SPEED

Good code can improve productivity and maximise your digital business' potential. As software product development businesses grow and their scale of operation increases, the processes and practices used by software developers become more critical. They can make the difference between a poor-quality product delivered late or a customer delighted by a fit-for-purpose product delivered on time and within budget.

"Our team thoroughly enjoyed the Build for Speed program. It was great to be with a team of experts who breathed our language and who were passionate about wanting to help us succeed.
The Build for Speed team also provided valuable advice on best practice, as well as practical advice on how to scale our business effectively. Big thumbs up for the program and a special mihi to the team that delivered it. "

Aaron McCallion, Executive Director at Waka Digital

HOW IT WORKS

Delivered by experienced software professionals, Build for Speed starts with analysis and benchmarking of your current software development capability and practices - mapping out an improvement checklist for action.

Build for speed will help you:

- Accelerate your path to market through faster product delivery
- Improve software development process and architecture
- Improve efficiency with automated testing tools and techniques
- Improve long term effectiveness using continuous delivery principles
- Realise business value and recoup investment sooner

Build for Speed works in two stages:

- Discovery: Over 6 - 12 weeks
- Technical and/or Agile Excellence: 2 – 4 months

COSTS

Co-funding is available for eligible businesses. For criteria and more information, please visit: callaghaninnovation.govt.nz/innovation-skills
